Course content

Why Attend

Organizations face increasing risks related to physical security, operational disruption, theft, cyber-physical threats, and asset loss. Protecting critical assets—whether infrastructure, information, or people—requires a structured and proactive security management approach.

This course provides participants with practical tools and strategies to design, implement, and manage effective asset protection systems. It focuses on risk-based security planning, prevention strategies, and integrated security operations to ensure business continuity and resilience.

Course Methodology

The course is delivered using a practical and applied learning approach:

- Real-world case studies from corporate and critical infrastructure environments
- Scenario-based security risk simulations
- Group discussions and problem-solving exercises
- Practical frameworks for security planning and asset protection
- Interactive analysis of security failures and best practices

Course Objectives

By the end of this course, participants will be able to:

- Understand core principles of asset protection and security management
- Identify and assess security risks to physical and operational assets
- Design effective security strategies and control measures
- Develop risk-based security plans and response frameworks
- Improve incident prevention, detection, and response capabilities
- Strengthen organizational resilience and asset integrity

Course content

Target Audience

This course is suitable for:

- Security Managers and Officers
- Facilities and Operations Managers
- Risk Management Professionals
- HSE (Health, Safety & Environment) Officers
- Corporate Security Teams
- Asset and Infrastructure Managers
- Administrative and Operational Leaders

Target Competencies

Participants will develop competencies in:

- Security risk assessment and mitigation
- Asset protection planning and strategy development
- Threat identification and vulnerability analysis
- Incident prevention and response management
- Crisis and emergency preparedness
- Security governance and compliance

Course outline

Day 1: Fundamentals of Asset Protection and Security Management

- Introduction to asset protection concepts
- Types of assets (physical, operational, human, informational)
- Security threats and risk landscape

Course content

Course outline

- Principles of security management systems
- Risk identification and vulnerability assessment
- Building a basic security framework

Day 2: Security Risk Assessment and Threat Analysis

- Security risk assessment methodologies
- Threat identification and classification
- Vulnerability and impact analysis
- Risk scoring and prioritization techniques
- Security risk registers and documentation
- Practical risk assessment exercise

Day 3: Physical Security Systems and Controls

- Physical security design principles
- Access control systems and technologies
- Surveillance and monitoring systems (CCTV, alarms, etc.)
- Perimeter protection and layered security
- Security zoning and critical asset protection
- Case study: facility security design

Day 4: Incident Management and Emergency Response

- Security incident lifecycle
- Detection, reporting, and escalation procedures
- Emergency response planning
- Crisis management and coordination

Course content

Course outline

- Business continuity considerations
- Simulation exercise: security incident response

Day 5: Strategic Security Management and Resilience

- Developing a security management strategy
- Governance and compliance frameworks
- Security KPIs and performance measurement
- Integration of security with organizational risk management
- Emerging threats and modern security challenges
- Final case study and action planning
